

Making a double-sided sign to fit the Projectapole brackets

Make two sign trays as follows...

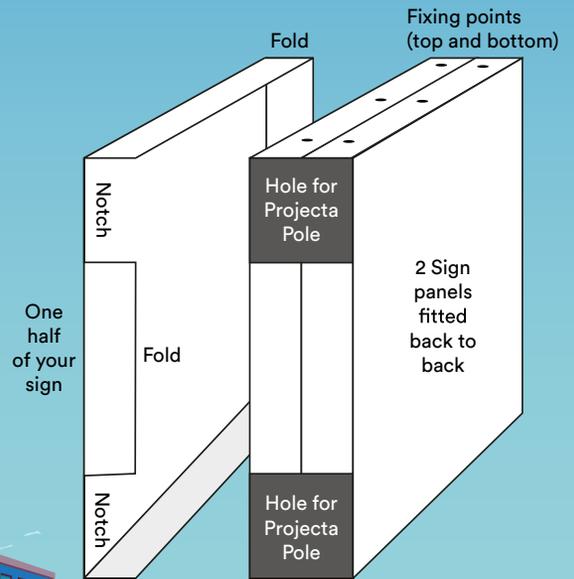

If using:

40mm pole: you will need a 23mm return on each sign tray

50mm pole: you will need a 28mm return on each sign tray

Make cut-outs top and bottom (52mm square to accommodate the 50mm pole) as per diagram, (or 42mm square to accommodate the 40mm pole) to allow for the sign to be inserted over and supported by the Projecta Poles.

1. Fold panel and screw to the Projecta Pole top and bottom to secure panels in place
2. Seal around the edge with silicone (not essential)
3. Securely install poles using thunderbolts or chemical fixings

You will also need ...

Self drilling colour headed screws

Chemical anchor studs

Thunderbolts

Projecta Poles can also be mounted vertically for mounting signs on top of walls
